

Ethics in R&I: Strategic Support for Responsible Science

Embed ethics at the heart of your research – with expert support for values, compliance, and impact in EU and international projects.

BACKGROUND

Ethical challenges in research and innovation are becoming more complex, especially in areas like biotechnology, health, AI, and data-driven science. Horizon Europe and other funding bodies now expect projects not only to comply with legal standards, but to demonstrate proactive engagement with ethical questions – from concept phase to exploitation. This is particularly relevant in collaborative and interdisciplinary settings, where legal, social, and cultural contexts intersect. Researchers, coordinators, and institutions often need support to navigate this landscape.

OUR JOINT SERVICE

In collaboration with innovethic – a leading partner in applied ethics – we provide comprehensive support in integrating ethical excellence into research projects.

- Ethics strategy for research proposals
- Co-creation of ethics frameworks for R&I activities
- Ethics management and advisory boards
- Training and reflection workshops
- Compliance and monitoring support
- Ethics communication and reporting

Our team combines deep understanding of ethics requirements with interdisciplinary expertise in life science and biotechnology.

EXPERTS
